

# SBF Flanged Housings

**The SBF flanged housings are designed to be weld-free. The heads are machined from solid stainless steel psi.**

By removing the welding process the costly additional documentation, approvals and testing for CE marking are eliminated.

Various flange types and pressure rating are offered as standard. Sizes from 1/2" up to 2" can be produced.

**SBF Series Housing**

Several flange types and sizes are available as standard designs and are based on our SS series housings

## Special Designs

**Need an unconventional or bespoke housing?**

**No problem.**

**Our skilled designers and engineers will work alongside you to build a custom-made solution that suits your needs.**

**Just let us know what you need.**
